

HEAVY-DUTY INDUSTRIAL CONVEYOR SOLUTIONS

Since 1968

SOUTHERN SYSTEMS INTERNATIONAL, LLC
HEAVY-DUTY INDUSTRIAL CONVEYORS

maximizing efficiency. minimizing downtime.

We Build Conveyors That Last.

Southern Systems International (SSI) delivers comprehensive material handling solutions through its integrated approach, encompassing engineering, fabrication, and installation. This turnkey capability ensures a streamlined project lifecycle and facilitates the development of custom conveyor systems precisely aligned with client operational requirements. Our in-house manufacturing processes enable stringent quality assurance and reliable on-time delivery, critical factors in optimizing production efficiency.

SSI's commitment extends beyond initial installation, providing comprehensive long-term support, including preventative maintenance, readily available OEM replacement parts, and scheduled inspections. This proactive service strategy minimizes downtime, extends equipment longevity, and maximizes client return on investment. Our proven expertise across diverse industrial sectors, from personal watercraft to Class 8 truck manufacturing, demonstrates our capacity to deliver robust and reliable material handling solutions tailored to a wide range of operational needs.

Power & Free Conveyor

SSI Power and Free conveyors provide automated, flexible material handling options with overhead or floor-mounted options. They enable custom routing and asynchronous operation and are used in applications like assembly and paint. Southern Systems builds custom Power and Free systems for loads from 25 to 25,000 lbs, with turnkey installation.

Tow Conveyor

SSI TracVeyor® in-floor systems provide safe, flexible cart transport for manufacturing and warehousing. Their flush design avoids traffic and safety issues and handles complex layouts. Load capacities range from a few pounds to over 100,000 pounds. Chain-on-Flat systems handle loads from 50 to 250,000 pounds with continuous, indexing, or asynchronous operation options.

Flat Top & Slat Conveyor

SSI Flat Top and Slat Conveyors are ideal for conveying and assembling large, heavy products like vehicles and industrial equipment. Available in widths up to 16 feet and with customizable chain pitches, these conveyors offer continuous or indexing movement at floor or working height, with adaptable fixtures for secure product placement.

Dual Strand Conveyor

SSI Dual Strand and Three Strand Conveyors offer economical pallet and fixture transport for storage and delivery, handling diverse loads from small boxes to heavy steel applications. These conveyors optimize assembly, processing, and storage by using gentle escapement devices for accumulation and integration with lift, transfer, and rotation equipment.

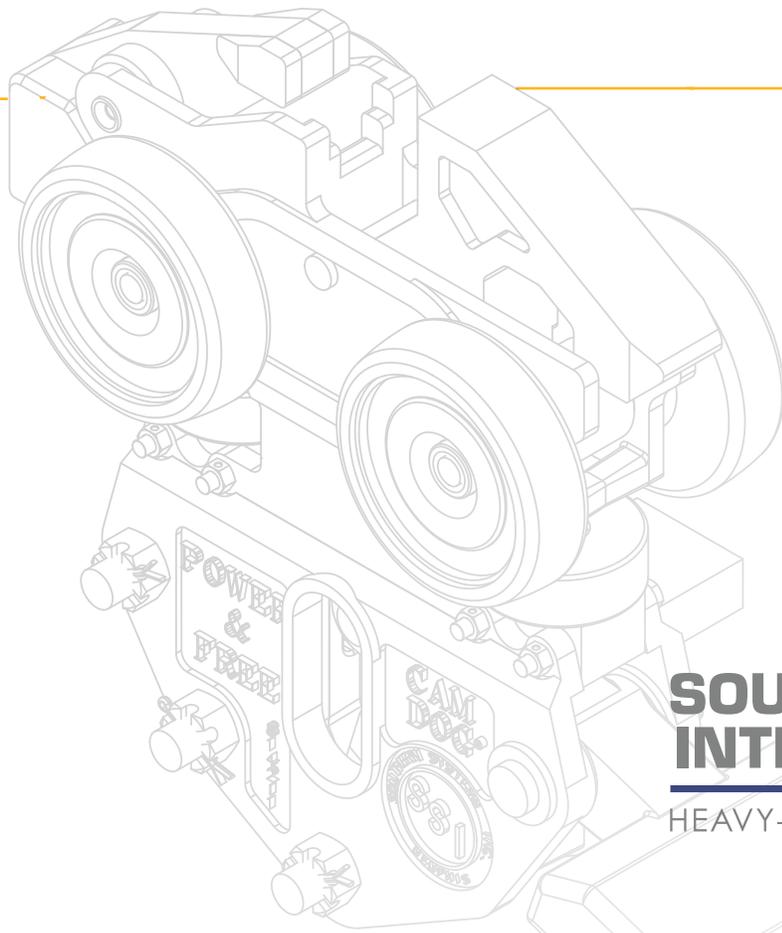

Belt & Roller Conveyor

SSI manufactures and integrates Belt and Roller Conveyor systems, which are widely used in various industries like warehousing and automotive. Beyond standard conveyors, we incorporate specialized equipment, including turntables, lifts, and transfers, to design effective, custom systems.

Automation Equipment

SSI manufactures a full range of Automatic Handling Equipment—upenders, loaders, lifts, turntables, ASRS, and more, essential for complex material handling systems. In-house engineering and rigorous testing guarantee smooth integration and rapid startups.
